

## Round Table

# Challenge or Obstacle for the future? Climate Change & Environmental Strategy for the Black Sea

Alexis Chatzimpiros
Adviser Energy / Islands
Conference of Peripheral Maritime Regions

## **Conference of Peripheral Maritime Regions**

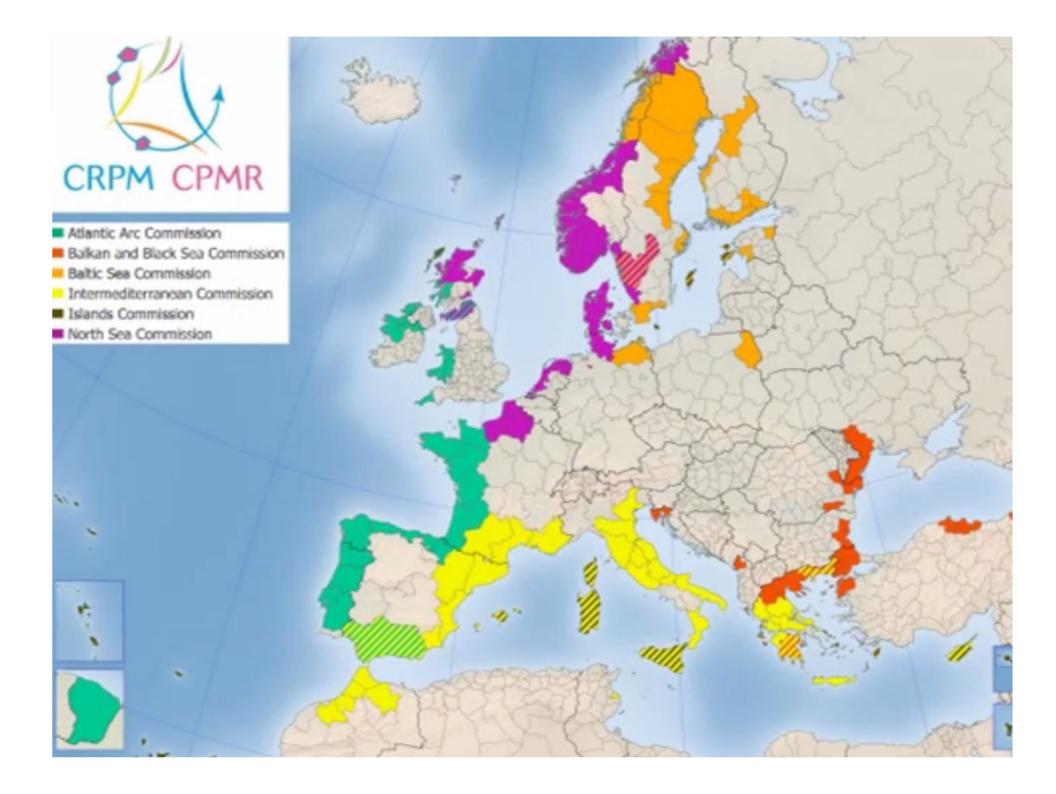

Not just an interest group but a think tank for Europe

Over 150 Member-Regions from 28 countries representing 200Mi inhabitants

Organisation at European level (thematic areas) and at Sea-basin level (Geographical Commissions)

Priorities: Maritime issues, Cohesion, Accessibility

**Energy/Climate Change** 

#### **Environment and Black Sea**

- The largest anoxic water basin in the world
- Coastal development, river diversion, over-exploitation of resources, pollution from agricultural, domestic and industrial sources, introduction of alien species have led to a marked degradation in the quality of the marine environment and loss of biodiversity.
- Some of the most significant effects:
  - the change in species composition and
  - the collapse of certain commercial fish stocks,
- Recent studies have identified <a href="https://www.numentalen.com/human-induced eutrophication">human-induced eutrophication</a> as the most significant long term environmental problem especially in the coastal areas.
- Oil & Gas: Environmental rules according to current European policies on integrated coastal zone management and on marine strategy?

#### Climate Change and Black Sea

#### New researches suggest:

- •The number of days of plant growth was reduced in these countries as a result of **reduced precipitation**, increased temperatures and low capacity for irrigation to supplement water needs.
- •The impacts of climate change in the Black Sea region are likely to affect agriculture in Ukraine, Romania, Moldova, Hungary, Bulgaria and Turkey.
- •A strong **legal framework** is necessary to deal with conflicting future demands for water.

## CRPM CPMR Regional approach for adaptation

Climate Change Vulnerability and Impact Assessment Review for the Black Sea Region

Role: Leadership at regional level

**Documentation**: Information and knowledge

**Cooperation**: Sharing and exchange of data

Dialogue: Multilevel cooperation

#### International negotiations for post-Kyoto agreement: 3 aims

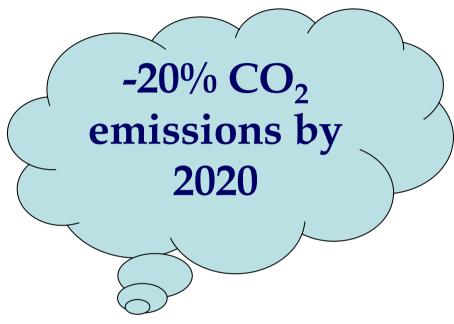

- •Ensure recognition of the role of local/subnational governments: progress in recent COP decisions (2010 and 2013)
- •Ensure engagement in the global processes and national efforts
- •Empowerment with financial, institutional and technical resources
- •CPMR is networking with other active networks towards **COP21** in Paris (December 2015)

## **CRPM CPMR** Regional approach for mitigation

#### **Sustainable Energy Action Plans**

- Covenant of Mayors
- Pact of Islands
- •Investments towards 2020
- •EU support available
- •Renewable Energy Production
- Energy efficiency
- •Smart Grids
- •Infrastructure in ports
- •Ferries / Fuels (LNG, biogas)

- Multilateral and Multilevel Cooperation required
  - Local Regional National

## CRPM CPMR Balkan - Black Sea Commission

- General Assembly 2015: CPMR premises and Committee of the Regions, 28-29 May, Brussels
- ♦ Thematic presentations on:
  - Transport
  - Cohesion
  - Maritime Issues
  - Energy & Climate Change
  - Macro-Regions

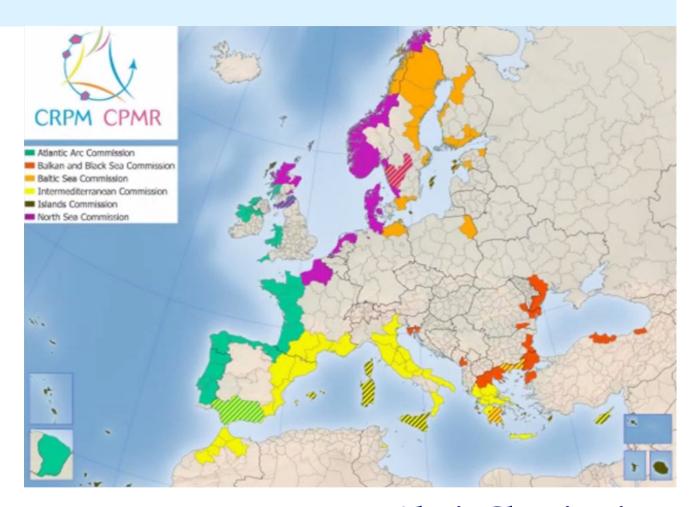

- ♦ Working Groups on Tourism and Business Cooperation
- ♦ Project proposal on Ecotourism
